

ISP Bandwidth is just \$4 per Megabit

- Locations connected via fiber, that choose 1Gbps, are charged \$1200/month. This connects all locations on the IRHN, upstream and downstream, at 1 Gigabit. If you send your radiology data to a location on the network, you don't need ISP bandwidth!
- Locations that choose 100Mbps are charged \$1000/month or \$750/month, depending on last mile connection. No need for ISP bandwidth to connect to other IRHN locations!
- **ISP BANDWIDTH IS \$4/MEGABIT.** (Most hospitals paying \$20/Meg to \$40/Meg now)
For data traffic that must go out via the public Internet, the IRHN makes ISP bandwidth available at \$4 per Megabit.
